

New Transitions Signature lenses are more responsive to direct and indirect sunlight. That means that they **get darker** in various sunny situations, when you're facing away from the sun, in reflected light, at different locations and at different times of day. You won't notice the change of tint, but you'll notice the great image definition and how true colours look. And when you go inside they **fade back to clear quickly**.

So no matter where you are, you **will enjoy the enhanced vision experience**.

What makes them better?

The technology inside the lens.

The exclusive molecular formulation allows the lenses to be more responsive to direct and indirect sunlight. A pioneer in light management, Transitions Optical has invested 5 years of research and extensive testing in this innovation.

Your life - your Transitions® lenses.

Transitions® Signature™

Optimal balance between outdoor darkness and indoor clarity.

Clear as an ordinary lens indoors.

Everyday adaptive lenses with a fast fade back speed.
